

Specialized Cyber Services for Healthcare Providers

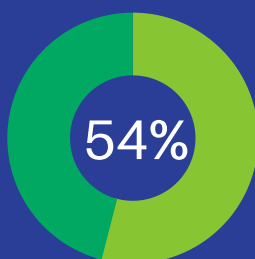

Brightly's Cyber Services for Healthcare Providers (HCPs) includes specialized cyber advocacy, assessments, protocols, training and tools to help healthcare providers enhance their cyber practices and defenses.

Between case record management, the need for robust client privacy, and the use of often-vulnerable software applications, HCPs are among the most at-risk businesses to phishing and ransomware attack.

By making a holistic assessment of an HCP's cyber risks and active defenses, we help your significantly decrease your threat surface for cyber attack. We examine multiple sources for breach — human error, technology, processes, premises and more — enabling a cyber strategy that mitigates those risks.

89% of healthcare organizations have had a data breach in the last two years.

54% of a practice's cyber vulnerability comes from untrained employees

Cyber Education Tools

Cyber training models and simulations for doctors, clinicians and staff that cover timely practices for protecting essential patient data.

Record Management

Defined protocols and procedures to ensure all digital and paper case files and patient records are handled and disposed of properly.

Safe Video Conferencing

The only multi-channel-authenticated video conferencing solution in the world, built to prioritize safety and privacy.

Office 365 Safety

Guidance to help HCPs guard against inherent vulnerabilities in standard software including Office 365.

Having good cybersecurity practices can protect your patients, promote your growth, and ensure your organization's success.
